Light-year - Wikipedia The light-year is a unit of length used to express astronomical distances and measures about 9.46 trillion kilometres or 5.88 trillion miles. As defined by the International Astronomical Union (IAU), a light-year is the distance that light travels in vacuum in one Julian year (365.25 days. How far is a light-year? | Astronomy Essentials | EarthSky Stars other than our sun are so far distant that astronomers speak of their distances not in terms of kilometers or miles but in light-years. Light is the fastest-moving stuff in the universe. What is a light year? | HowStuffWorks A light year is a way of measuring distance. That doesn't make much sense because "light year" contains the word "year," which is normally a unit of time . Even so, light years measure distance.

Light-year | Definition of Light-year by Merriam-Webster :a unit of distance equal to the distance that light travels in one year (about 5.88 trillion miles or 9.46 trillion kilometers) light-years used to say that someone or something is much better or more advanced than others used to refer to a time that is or seems very far away. How Long is a Light-Year? - Glenn Research Center How Long is a Light-Year? The light-year is a measure of distance, not time. It is the total distance that a beam of light, moving in a straight line, travels in one year.
